CONCEPT / TEAM BRIEF

MARTIAN MAP

Discover Mars. Plan a science-focused Marswalk in Jezero.

Proposed user workflow • Scientific goal pending team discussion

USER JOURNEY

01 Discover Mars; enter Jezero

Use the global globe to discover craters and their context.

Enter Jezero for the detailed Marswalk demonstration.

02 Set a local base and crew profile

Choose a simulated base inside the supported Jezero area.

Walking is central; crew vehicles and robots support the mission.

03 Inspect the evidence layers

Compare imagery, terrain, and geology or mineralogy.

Show mission sources, coverage, resolution, and missing evidence.

04 Set the scientific goal

UNSELECTED — TO BE DECIDED WITH THE TEAM

Browse freely; mission ranking waits for a selected goal.

05 Compare reachable science stops

Compare local outcrops, deposits, or viewpoints within Jezero.

Explain science value, travel difficulty, and data confidence.

06 Plan and review the Marswalk

Inspect a round-trip route, stop activities, and reference images.

Open a field view with numbered stops and a science checklist.

SCREEN CONCEPT

MARTIAN MAP Explore / Plan

Illustrative planet • not a geographic map

MISSION GOAL

Not selected

LOCAL SCIENCE STOP

Scientific value —

Travel difficulty —

Data confidence —

No ranking until mission inputs are defined.

WHAT MAKES THE RANKING USEFUL

Explain each stop and its planned science task.

Keep science and difficulty visible separately.

Show missing data rather than inventing scores.

Include return travel and time spent at stops.

SCOPE OF THIS BRIEF

Visual concept only. No scoring formula chosen.

No live data, validated routes, or safety ratings.

TEAM DECISIONS STILL OPEN

Scientific goal • scoring weights • equipment profiles • verified base and stop coordinates

Based on Space Apps.docx and our discussion. Catalog coverage and terrain detail will vary by location.
